

ENERGY STAR® Qualified UPS Products

The ENERGY STAR Program was established by the U.S. Environmental Protection Agency (EPA) as a way to identify and promote energy-efficient products, in order to reduce energy consumption, help individuals save money and aid in the protection of our climate through superior energy efficiency.

The ENERGY STAR UPS Program helps customers make informed decisions when purchasing, as they consider ways to efficiently design and apply UPS from small server deployments to large data centers. ENERGY STAR qualified UPS products use an average of 35% less energy than their standard counterparts.

Following is a list of Liebert® UPS products tested and qualified to bear the ENERGY STAR mark.
